EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Geris on 10-20-2005.

This examiner's amendment is responsive to a Board's decision rendered on 7-14-2005.

The application has been amended as follows:

Claims 1 and 13-17 have been canceled.

Claims 2, 3 and 5 have been amended to read as in the following:

Claim 2. A method for controlling tension in a web of a printing press, the printing press including an infeed, printing units and a folder, the method comprising the steps of:

increasing an infeed tension in the web between the infeed and the printing units in response to a signal indicating a change to a printing mode from a white web mode; and

decreasing the infeed tension in the web in response to a further signal indicating a change from the printing mode to the white web mode,

wherein the infeed tension is increased so that a substantially similar tension is maintained in the web after the printing units during the change from the printing mode to the white web mode.

Claim 3. A method for controlling tension in a web of a printing press, the printing press including an infeed, printing units and a folder, the method comprising the steps of:

increasing an infeed tension in the web between the infeed and the printing units in response to a signal indicating a change to a printing mode from a white web mode; and

decreasing the infeed tension in the web in response to a further signal indicating a change from the printing mode to the white web mode, wherein the tension is controlled via a PLC.

Claim 5. A method for controlling tension in a web of a printing press, the printing press including an infeed, printing units and a folder, the method comprising the steps of:

increasing an infeed tension in the web between the infeed and the printing units in response to a signal indicating a change to a printing mode from a white web mode; and

decreasing the infeed tension in the web in response to a further signal indicating a change from the printing mode to the white web mode,

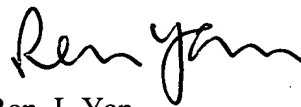

wherein the tension after the printing units is controlled by a PLC controller so as to maintain a substantially similar tension in the web during the change from the printing mode to the white web mode.
